

PENNSYLVANIA COMPENSATION RATING BUREAU

Temporary Staffing Loss Costs

The methodology to determine workers compensation loss costs for temporary staffing risks calculates factors that are applied to direct employment loss costs by class in this filing. Those factors represent the temporary staffing pure premium compared to the direct employment pure premium for each class.

Note that the loss costs reflect rating values calculated prior to being adjusted to include certain surcharges that are included in approved and published loss costs (“pre-surcharge basis”). Those surcharges include provision for the funding of the Office of the Small Business Advocate, offsets for the net credits offered for participation in the Merit Rating Plan, the Certified Safety Committee Program and the Construction Classification Premium Adjustment Program.

In this approach, the PCRB classes are mapped to one of five industry groups consistent with those used by the National Council on Compensation Insurance, Inc. (NCCI). In this filing, they are considered the five PCRB “sub-industry groups”. The classes are mapped into one of five industry groups (Manufacturing, Contracting, Office & Clerical, Goods & Services, and Miscellaneous) based on the PCRB to NCCI class mapping.

Exhibit 1 shows Policy Years 2014-2018 payrolls (in \$000) for each of the five PCRB sub-industry groups. For a majority of the payroll data used to calculate temporary staffing loss costs, payrolls represent the actual amounts reported to the PCRB. For the remaining payroll data, a number of temporary staffing classes have been assigned temporary staffing risks for two or more direct employment classes. That is, actual temporary staffing payroll amounts associated with each of those direct employment classes are not available. Therefore, a calculation of adjusted temporary staffing payroll amounts attributable to each direct employment class is performed. The adjusted temporary staffing payroll associated with each direct employment class is calculated by multiplying the temporary staffing class payroll by the ratio of the direct employment class payroll to the total statewide payroll for all direct employment classes contributing to that temporary staffing class. Similar calculations were performed for each such temporary staffing class and their associated direct employment classifications. Exhibit 5 (described later) shows the mapping of current temporary staffing code and direct employment code combinations to the proposed temporary staffing codes.

Exhibit 2 shows the calculation of indicated pure premium differentials for the temporary staffing risks relative to the direct employment risks. These differentials are calculated by sub-industry group, and in total, separately for Serious, Non-Serious and Medical Only. Within each sub-industry group, weights by class were calculated based on Policy Years 2014-2018 temporary staffing payroll and applied against both the Temporary Staffing indicated pure premium as well as the Direct Employment indicated pure premium to determine the indicated pure premium differentials for each sub-industry group and in total.

The actual indicated pure premium used in the differential calculations for both temporary staffing risks and direct employment risks is taken from the Class Book.

Exhibit 3 calculates credibility-weighted pure premium differentials of temporary staffing pure premiums to direct employment pure premiums, by sub-industry group and in total, for Serious, Non-Serious and Medical Only.

For the total of all sub-industry groups, credibility is determined as a function of total payroll using the payroll credibility table, which can be found in the Other and Supporting Classification Exhibits. The credibility is applied to the total indicated pure premium differentials from Exhibit 2. The complement of credibility is applied to unity.

For the individual sub-industry groups, credibility is determined as a function of sub-industry group payroll using the payroll credibility table. The credibility is applied to the sub-industry group indicated pure premium differentials from Exhibit 2. The complement of credibility is applied to the credibility-weighted differentials calculated for the total of all sub-industry groups.

Exhibit 4 determines the proposed temporary staffing loss costs by class. For each class, an indicated April 1, 2022 temporary staffing loss cost is calculated (column (14)) by multiplying the proposed April 1, 2022 direct employment loss cost by the total proposed temporary staffing pure premium divided by the total April 1, 2022 direct employment pure premium. If a class's total proposed temporary staffing pure premium and April 1, 2022 direct employment pure premium are each zero, then the associated sub-industry group's temporary staffing and direct employment pure premiums are used to calculate an appropriate factor.

The total proposed temporary staffing pure premium is the sum of the Serious, Non-Serious and Medical Only temporary staffing pure premiums. The three temporary staffing pure premiums are calculated by multiplying the April 1, 2022 Serious, Non-Serious and Medical Only direct employment pure premiums by the associated credibility-weighted differentials (calculated in Exhibit 3) of temporary staffing pure premium to direct employment pure premium. The proposed temporary staffing loss costs by class (column (16)) are determined by capping the indicated temporary staffing class loss cost change at +/- 25% of the proposed industry group change applied to the current April 1, 2021 temporary staffing loss costs by class. Note that codes may show changes greater than +25.0% or lower than -25.0%. These changes are due to the rounding of the calculated loss cost values to two decimal places.

Exhibit 5 is a summary of the current and proposed post-surcharge temporary staffing loss costs and the changes by class for the proposed temporary staffing codes. This exhibit is ordered by current temporary staffing code and direct employment code within the current temporary staffing code. The values shown in this exhibit were taken from Exhibit 4.
