Small Deductible Loss Elimination Ratios

The attached pages show the derivation of loss elimination ratios applicable to small deductible coverages at the \$1,000, \$5,000 and \$10,000 levels.

The method used is very similar to that employed in the calculation of excess loss factors and also relies solely on Pennsylvania experience. Within each hazard group, excess ratios by type of injury are weighted together to derive average excess ratios as shown on Page 2.

Page 1 shows the proposed loss elimination ratios which are the complement of the excess loss factors from Page 3 and compares the proposed loss elimination ratios with the current loss elimination ratios.
